

### REMARKS

The amendments add the proper SEQ. ID. NO. next to sequences in the specification. Please note that two versions of the application were originally filed. One was the copy of the International Application as filed (29 pages, including figures). The second was a copy of the Amended Specification filed with the PCT Office that was transmitted to the U.S. Office upon entry into the U.S. National Stage (31 pages, including figures). The page and paragraph references used in this amendment to identify locations within the specification where paragraphs are to be replaced, refer to page and paragraphs of the Amended Specification filed with the PCT Office ("22727/04050" on top of each page of specification as filed). The page and paragraph references used do not refer to locations within the International Application as Filed ("22727/04031" on top of each page of specification). Please enter the amendments into the case.

Respectfully submitted,

Dated: \_\_\_\_\_

5/21/03
